

49FlashMoney Product Requirements Document

v1.0

Volume 1 – Product Vision & Core Platform

Document Purpose

Define the product vision, business objectives, platform capabilities, MVP scope, and core functional requirements for 49FlashMoney. This PRD is intended to be the authoritative specification for engineering, product, QA, and operations.

Vision

49FlashMoney will evolve from a lottery-focused platform into a modular, multi-game gaming platform. Lottery becomes one game provider within a unified Game Engine that also supports Scratch Cards, Aviator, Wingo, Mines, Crash, Dice, Slots, Dragon Tiger, Keno, and future games.

Success Metrics

Business KPIs:

- Daily Active Users
- Deposits and withdrawals
- Gross Gaming Revenue
- Retention (D1/D7/D30)
- Referral conversion
- VIP progression

Engineering KPIs:

- 99.9% availability
- <250 ms API latency (P95)
- Immutable financial ledger
- Automated CI/CD
- >80% critical-path test coverage

Personas

Player: registers, deposits, plays games, withdraws.

VIP Player: receives exclusive promotions and support.

Operations Admin: manages users, payments, RTP, promotions.

Finance Admin: reconciles deposits and withdrawals.

Support Agent: resolves user issues.

Functional Requirements

Authentication (OTP/email), profile management, wallet ledger, deposits, withdrawals, referrals, promotions, notifications, analytics, admin portal, game engine, game catalog, WebSocket-powered live events, audit logging.

Architecture

Frontend: React + TypeScript + Vite.

Backend: Django + DRF + Django Channels.

Database: PostgreSQL.

Cache/Realtime: Redis.

Async Jobs: Celery.

Storage: Object Storage.

Monitoring: Metrics, logs, alerts.

MVP

Authentication
Wallet Ledger
Payments
Lottery
Scratch Cards
Admin Dashboard
Analytics
Referral System
Notification System
Generic Game Engine

Phase 2

Aviator
Wingo
Mines
Crash
Dice
Slots
VIP
Jackpot
Leaderboards
Live Feed
Tournaments
Bonus Engine

Acceptance Criteria

Every financial event creates a ledger entry.
Every game implements the Game Engine interface.
Admin-configurable RTP and limits.
End-to-end tests for critical money flows.
Observability for production.

Roadmap

Sprint 1–2: Stabilize platform and ledger.
Sprint 3–5: Generic game engine and migration.
Sprint 6–10: Aviator, Wingo, Mines.
Sprint 11+: Promotions, VIP, tournaments, scaling.

Appendix: Planned Volumes

Volume 2: Wallet, Payments, Admin, Promotions, Analytics.

Volume 3: Detailed PRDs for every game.

Volume 4: Database, APIs, Security, DevOps, QA, Deployment.
