

49FlashMoney Product Requirements Document

v1.0

Volume 2 – Wallet, Payments, Admin & Platform Services

1. Wallet & Ledger

The wallet is built on an immutable ledger. User balances are derived from ledger entries rather than edited directly.

Ledger event types:

- Deposit
- Withdrawal
- Bet
- Winnings
- Bonus
- Refund
- Referral reward
- Adjustment (admin only)

Requirements:

- ACID transactions
- Idempotent processing
- Full audit history
- Reconciliation support

2. Deposits

Support UPI, bank transfer, QR and payment gateways.

States: Initiated → Pending → Confirmed/Failed.

Only confirmed deposits create ledger credits.

3. Withdrawals

Eligibility checks:

- KYC status
- Available balance
- Fraud rules
- Limits

Workflow:

Requested → Review → Approved → Paid → Completed.

4. Referrals & Promotions

Referral codes, configurable campaigns, welcome bonuses, cashback, seasonal promotions, wagering rules and expiry policies managed from the admin portal.

5. Admin Portal

Modules:

Users, Wallets, Transactions, Payments, Games, RTP, Promotions, VIP, Analytics, Support, Audit Logs, Feature Flags.

6. Analytics

KPIs:

DAU, MAU, GGR, NGR, deposits, withdrawals, RTP, retention, referral conversion, fraud alerts.

7. Notifications

Email, SMS, Push and in-app notifications for OTPs, deposits, withdrawals, promotions and game events.

8. Acceptance Criteria

Every financial event generates a ledger record.

All payment APIs are idempotent.

Every admin action is audited.

Critical workflows are covered by automated integration tests.
