v1.0

Volume 3 – Game Specifications

Game Engine

All games integrate through a common Game Engine interface: Create Round → Accept Bet → Validate Wallet → Resolve Outcome → Calculate Payout → Record Ledger → Publish WebSocket Events → Store History. Every game exposes admin-configurable RTP, betting limits, enable/disable status, maintenance mode, and audit logs.

Aviator

Overview: Real-time multiplier game. Players cash out before crash. Configurable RTP, round duration, min/max bet, provably fair seed support.

Functional Requirements

- Validate player eligibility
- Reserve wallet balance before play
- Record every bet in immutable ledger
- Persist game history
- Publish real-time events where applicable
- Support configurable payout tables and RTP
- Expose admin configuration and reporting

Acceptance Criteria

Game passes automated tests, admin configuration works, financial transactions reconcile correctly, results are auditable, and player history is queryable.

Wingo

Overview: Time-based number prediction game with configurable periods, outcomes, payouts, and history.

Functional Requirements

- Validate player eligibility
- Reserve wallet balance before play
- Record every bet in immutable ledger
- Persist game history
- Publish real-time events where applicable
- Support configurable payout tables and RTP
- Expose admin configuration and reporting

Acceptance Criteria

Game passes automated tests, admin configuration works, financial transactions reconcile correctly, results are auditable, and player history is queryable.

Lottery

Overview: Scheduled draws, ticket lifecycle, prize pools, rollover, admin draw controls.

Functional Requirements

- Validate player eligibility
- Reserve wallet balance before play
- Record every bet in immutable ledger
- Persist game history
- Publish real-time events where applicable
- Support configurable payout tables and RTP
- Expose admin configuration and reporting

Acceptance Criteria

Game passes automated tests, admin configuration works, financial transactions reconcile correctly, results are auditable, and player history is queryable.

Scratch Cards

Overview: Instant outcome cards with rarity tiers, prize tables, configurable odds.

Functional Requirements

- Validate player eligibility
- Reserve wallet balance before play
- Record every bet in immutable ledger
- Persist game history
- Publish real-time events where applicable
- Support configurable payout tables and RTP
- Expose admin configuration and reporting

Acceptance Criteria

Game passes automated tests, admin configuration works, financial transactions reconcile correctly, results are auditable, and player history is queryable.

Mines

Overview: Grid game with configurable mine count, progressive multiplier, manual cashout.

Functional Requirements

- Validate player eligibility
- Reserve wallet balance before play
- Record every bet in immutable ledger
- Persist game history
- Publish real-time events where applicable
- Support configurable payout tables and RTP
- Expose admin configuration and reporting

Acceptance Criteria

Game passes automated tests, admin configuration works, financial transactions reconcile correctly, results are auditable, and player history is queryable.

Crash

Overview: Shared multiplier game similar to Aviator with live WebSocket events.

Functional Requirements

- Validate player eligibility
- Reserve wallet balance before play
- Record every bet in immutable ledger
- Persist game history
- Publish real-time events where applicable
- Support configurable payout tables and RTP
- Expose admin configuration and reporting

Acceptance Criteria

Game passes automated tests, admin configuration works, financial transactions reconcile correctly, results are auditable, and player history is queryable.

Dice

Overview: High/low configurable probability game with dynamic payout calculation.

Functional Requirements

- Validate player eligibility
- Reserve wallet balance before play
- Record every bet in immutable ledger
- Persist game history
- Publish real-time events where applicable
- Support configurable payout tables and RTP
- Expose admin configuration and reporting

Acceptance Criteria

Game passes automated tests, admin configuration works, financial transactions reconcile correctly, results are auditable, and player history is queryable.

Dragon Tiger

Overview: Two-card comparison game with betting options and settlement rules.

Functional Requirements

- Validate player eligibility
- Reserve wallet balance before play
- Record every bet in immutable ledger
- Persist game history
- Publish real-time events where applicable
- Support configurable payout tables and RTP
- Expose admin configuration and reporting

Acceptance Criteria

Game passes automated tests, admin configuration works, financial transactions reconcile correctly, results are auditable, and player history is queryable.

Slots

Overview: RNG reel engine with paylines, symbols, bonus rounds, RTP configuration.

Functional Requirements

- Validate player eligibility
- Reserve wallet balance before play

- Record every bet in immutable ledger
- Persist game history
- Publish real-time events where applicable
- Support configurable payout tables and RTP
- Expose admin configuration and reporting

Acceptance Criteria

Game passes automated tests, admin configuration works, financial transactions reconcile correctly, results are auditable, and player history is queryable.

Keno

Overview: Number selection game with configurable draws and payout tables.

Functional Requirements

- Validate player eligibility
- Reserve wallet balance before play
- Record every bet in immutable ledger
- Persist game history
- Publish real-time events where applicable
- Support configurable payout tables and RTP
- Expose admin configuration and reporting

Acceptance Criteria

Game passes automated tests, admin configuration works, financial transactions reconcile correctly, results are auditable, and player history is queryable.

Lucky Wheel

Overview: Weighted prize wheel with configurable segments and reward mapping.

Functional Requirements

- Validate player eligibility
- Reserve wallet balance before play
- Record every bet in immutable ledger
- Persist game history
- Publish real-time events where applicable
- Support configurable payout tables and RTP
- Expose admin configuration and reporting

Acceptance Criteria

Game passes automated tests, admin configuration works, financial transactions reconcile correctly, results are auditable, and player history is queryable.
